OUR PROJECTS

OUR SPECIALIZATION

- ✓ Aluminum Doors & Windows Systems
- ✓ Glass Partition Works
- ✓ ACP Sheet Installation
- ✓ Commercial & Residential Fabrication
- ✓ Custom Design Solutions

WHY CHOOSE US?

- ✓ High-Quality Materials
- ✓ Professional Installation
- ✓ Modern Designs
- ✓ Competitive Pricing
- ✓ Durable & Weather Resistant
- ✓ Timely Project Completion

CONTACT US

TYPES OF GLASS

USED IN

GLASS FACADES

Glass is more than just a design element... Choosing the right type of glass affects thermal performance, lighting, safety, acoustic comfort, and energy efficiency.

1. TEMPERED GLASS

Heat-treated for strength and durability. It is 4–5 times stronger than regular glass and breaks into small, less harmful pieces. Widely used in curtain walls, doors, and external facades.

2. LAMINATED GLASS

Consists of two or more glass layers bonded with a PVB or SGP interlayer. Provides high safety, security, and acoustic insulation. Stays intact even when broken.

3. DOUBLE GLAZED UNIT (DGU)

Consists of two glass panes separated by an air gap or Argon gas. Improves thermal insulation and reduces energy consumption.

4. LOW-E GLASS

Coated with a microscopically thin layer that reflects heat while allowing natural light to enter. Enhances energy efficiency and indoor comfort.

5. REFLECTIVE GLASS

Coated with a metallic layer to reflect solar heat and reduce glare. It gives buildings a modern and elegant appearance.

6. CERAMIC FRIT GLASS

Printed with ceramic patterns to control light, reduce glare, and add an aesthetic architectural touch to the facade.

7. ACOUSTIC GLASS

Designed to reduce sound transmission. Ideal for buildings located in noisy environments such as urban areas, airports, and highways.

The right glass choice depends on performance requirements, climate, safety, design intent, and the specific needs of your project.
